PROJECTS

1. **DeviceExpress** - An Online secondhand laptop selling & buying website. [Live Site](#) | [Client Side](#) | [Server Side](#)

Technologies: React, React Router, Custom Hooks, Tailwind CSS, Node, Express, MongoDB, Firebase, JWT, Stripe

- Buyer, Seller, and Admin panels are Implemented, where the buyer can purchase the product using Stripe.
- Another role Admin can verify the seller's status unverified to verify and manage all buyer's and sellers' info.
- The seller can add their product and advertise those products on the home page and delete them anytime.

2. **HealthPursue** - An online health service where user can give their opinions. [Live Site](#) | [Client Side](#) | [Server Side](#)

Technologies: React, React Router, Daisy UI, Tailwind CSS, Node, Express, MongoDB, Firebase, JWT

- Authenticated users can add, edit, delete their opinions, and can view all their comments on their profile.
- A User can add different types of health services and see the reviews of other users about different services.
- Firebase authentication is integrated with JWT, so only authenticated users can perform the above actions.

3. **TeleCourse** – A course platform where various types of courses are available [Live Site](#) | [Client Side](#) | [Server Side](#)

Technologies: React, React Router, Tailwind CSS, Node, Express, Firebase

- Authenticated users can access the course checkout route and can download the course outline in PDF format.
- Valid Users can dynamically search by course categories and see details info about available courses.
- Implemented Navbar dark mode toggle, active route, google login using firebase, and update user information.
